

Product Announcement

Morpheus Lights introduces the new, improved **ColorFader3™** series - adding remote *variable-speed* DMX fan control, direct push-button addressing and state-of-the-art electronics to the time-tested ColorFader™ line

Morpheus' original ColorFader™ revolutionized automated color control for conventional fixtures with its patented subtractive color system - the *only* way to add full CYM color mixing to conventional lights.

The new ColorFader3™ series updates the time-tested **S Fader™**, **M Fader™**, **XL Fader™** and **8 Fader™** models with state-of-the-art control electronics that expand functionality, simplify operation and optimize performance.

A unique feature of ColorFader3™ is remote *variable-speed* DMX fan control that permits cooling fans to be gradually brought to speed when they're needed – without the abrupt rush of full-speed fans switching on. *Variable-speed* fan control can be assigned to any DMX-512 channel.

Technical staff will appreciate the user-friendly push-button controls and a bright LED display that make the ColorFader3™ easy to set-up and address, as well as the dedicated indicators that permit control status and DMX data reception to be confirmed from a distance.

ColorFader3™ units operate on 2 or 3 DMX-512 channels: 3-channel control lets you mix thousands of subtle color variations by directly actuating the independent Cyan, Yellow and Magenta filters. 2-channel control gives you dynamic variable-speed ColorFader™ transitions between 90 pre-programmed colors or 10 pre-programmed chases.
